PROFILE

CoverCat is a unique brand manufacturer of specialist coating application equipment originally formed in 1984. Since 2011 and an acquisition by Hyperion Equipment Ltd., the new owners of the CoverCat brand and product range are actively carrying out an expansion drive to new and existing clients worldwide.

CoverCat has now opened a facility in Thailand and is providing a fully equipped range of machines for the PFP, Industrial Painting and Pipelining Industries from a new site in Rayong, Thailand and will service south-east asia from this facility.

Our aim is to market, supply and support the specialist coating application industry through a choice of agents and distributors and to create further strategic alliances with manufacturers of complimentary products.

We are extremely grateful to our customers past and present for their support and it is with this in mind that we set out our product range for the future with new goals to further improve and expand our range of equipment and services. At the outset, in 1984, the company supplied Industrial Paint Spraying Equipment, offering both Sales and Hire options with the added benefit of on site or in-house servicing capability and this is still a valuable part of the service we provide.

CoverCat designed and manufactured its first Original Equipment Design of Plural Component coating system in 1988 and created the name CoverCat for all future products. We now have a 30 year history and 25 years of Engineering design to support the client and dealer network.

The CoverCat range of standard systems are available either directly or through a nominated distributor. We are also represented by several authorised factory approved Agents.

CoverCat is also experienced at producing special or unique systems designed and manufactured to individual customer requirements.

We will always strive to recognised the need to be at the forefront of spray technology and continue to invest in research and development to create innovative solutions to meet our clients needs on a world-wide basis.

Our new CNC manufacturing facility ensures this will continue into the future

Service, Hire and Technical Support

CoverCat equipment is known and used world-wide by customers who require a reliable and repeatable quality of application for both high and low solids coatings:

CoverCat provide a complete service to Spray Coating applicators and their clients by offering to undertake a wide range of activities for new or existing equipment:

- Application Partnerships
- Research & Development
- Design
- Manufacture
- Installation
- Conversion
- Refurbishment

- Testing
- Training
- Support

- Ship Building
- Off Shore Maintenance
- Oil & Gas Industry
- On-site Service
- Pipeline Renovation
- Petrochemical facilities
- Water & Waste Water
- Hire/Rental/Leasing

DEMONSTRATIONS, TESTING AND TRAINING

CoverCat will be pleased to arrange demonstration equipment in Europe, Thailand and throughout South East Asia and also further afield worldwide by special arrangement. CoverCat is able to carry out demonstrations on site or in house. Please contact our offices to make arrangements.

A comprehensive training program is recommended with the commissioning of any system. At each stage of the training course a large emphasis is placed on the importance of preventative maintenance. A numbered certificate will be issued to everyone completing the training course.

CoverCat IN-SITU SPRAY LINING RIGS

CoverCat Lining Solutions manufactures new in-situ spray lining rigs to individual requirements for a number of customers and can offer the option of modifying, refurbishing or upgrading existing equipment for the application of various component products.

For further details, contact CoverCat Lining Solutions.

CoverCat Lining Machinery

The Turbine head is connected to the Lining Rig through an umbilical hose assembly carefully constructed and Kevlar braided in lengths up to 750feet (250m)

A range of special coating application turbines are available to allow coatings to be applied in pipes from 1.1/4" (32mm) i.d. to 40" (1250mm) i.d. (Insitu Lining rigs may only coat pipe above 3" (75mm)

The Lining rig is controlled by a specially developed computer system using CoverCat HMI software with remote support by digital modem. The System and software is DWI compliant.

CoverCat Factory Lining Equipment

CoverCat Pipeline Engineering has a range of standard designs of Internal Pipe-coating machinery. We are also proud of our design philosophy in utilising standard components from our range together with custom made parts and off shelf items from a wide variety of suppliers within the engineering, electrical and control industries.

The range is extensive, from a simple 2 man operated in situ pipe-coating machine used in a domestic drain and sewer to large in-house plant with 120" (3metre) diameter and 60feet (18 metre) length tubular sections.

The unique CoverCat Containerised Pipe Plant system is built into a set of 9 containers and is capable of internal and external blasting and coating or any combination of these. This may be linked into other **CoverCat HMI Flow Monitoring** equipment to provide a fully automated coating thickness and speed control with print out and download functions. The boom may be changed to larger sizes to accommodate different coating head and specifications may be adjusted to individual requirements. A range of pipe handling and pipe support frames are available to allow manual or automated handling of pre coated and finished pipes as required. Coatings may be provided to the system from **CoverCat Single and Plural Component Systems** or may be adapted to existing coating plants

CoverCat Factory Lining Equipment

The **CoverCat Pipeboom 600** (above) is a self contained drive and boom system capable of internal coating application in pipes from 2" (50mm) to 24" (600mm) and upto 60feet (18metres) in length. Boom sections are typically 20feet (6metres) long.

Larger sizes of pipe upto 98" (2500mm) are coated with the **CoverCat Pipe Boom 1000** is a larger scale version of the unit above and is suitable for lining pipes in the range 20" (500mm) to 120" (3050mm)

Our highly trained and skilled engineers work along side support staff and where necessary special sub contractors in assembly of our systems.

The machines are linked into our **CoverCat HMI Flow Monitoring** equipment to provide a fully automated coating thickness and speed control with print out and download functions.

Boom units may be changed to larger sizes to accommodate different coating head and specifications may be adjusted to individual requirements.

A range of pipe handling and pipe support frames are available to allow manual or automated handling of pre coated and finished pipes as required. Coatings may be provided to the system from **CoverCat Single and Plural Component Systems** or may be adapted to existing coating plants

CoverCat 900 PIPESNAKE

Articulated Snake with Multiple Drive Units for negotiating tight bends & inclines, fully reversible

The Pipe Snake has been developed to fulfil the need for a pipe coating & inspection tool which was able to negotiate tight corners, in any direction, and able to climb and descend inclines.

The PipeSnake and a new Pipe Mole are being made available as inspection and repair tools for areas of special configuration and where access may be a problem.

The machine is designed to work in wet or hazardous areas.

The only system in the world capable of coating internally around bends from 1.5D in sizes from 6" (150mm) to 40" (1000mm).

The PipeSnake is an articulated self powered drive system capable of negotiating bends and climbing vertically up and down in complex pipe systems in need of renovation and repair.

The system is remotely controlled and may be inserted up to 300feet (100metres) in to the host pipe through a series of bends and may even accommodate tapered sections.,

CoverCat Small Bore Lining

FROM OLD TO NEW IN 1 DAY

We offer an innovative system for lining small diameter pipe in-situ within buildings and other sub surface work areas. Lining can be carried out in vertical and horizontal pipe and also in bends, tees and intersections upto 15metres (50feet) at each lining. The minimum pipe size is 40mm (1.5") in straight pipe and 2" (50mm) with 90 degree bends

Passive Fire Protection (PFP) Application Equipment

Solvent Free Epoxy Intumescent Plural Component Spray

CoverCat 452F

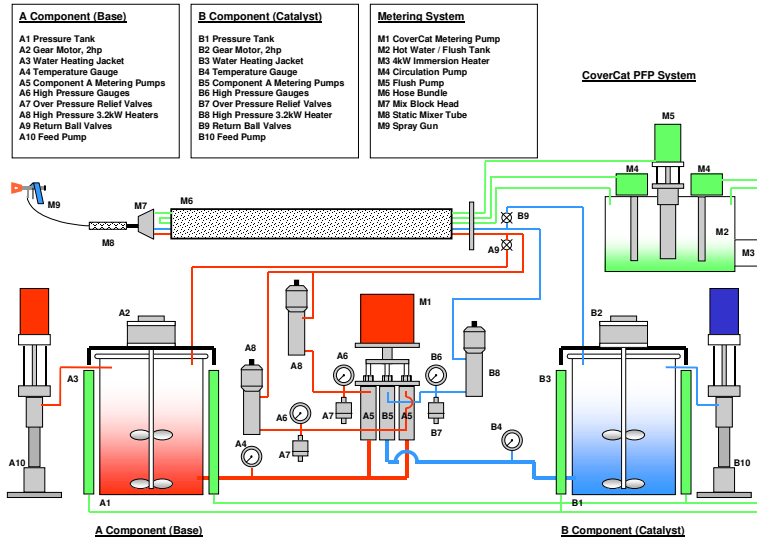

High capacity PFP application Machine

CoverCat produces the largest 450 series units for application of high volumes of PFP materials in the largest of fabrication facilities

The system uses 3 phase electrical power at 220V or 400/440V (to be specified).
Hose lengths to 60 metres plus remote mix manifold

- Easy to Maneuver and operate
- Manufactured for use with heavy duty fixed ratio coatings
- Air powered, hot water heated hose and flush
- Avoids handling and manual mixing
- Increased safety - no solvent addition
- Improves mix quality and spray quality
- All equipment on one cart unit
- Single power cable from 3 phase supply
- Lift Frame, forklift pockets and a 4 wheel cart

CoverCat 350F, 450F Skid units and 351F, 451F ATEX PFP Units

The original and popular skid mounted systems for Passive Fire Protection

The CoverCat 351F and 451F System is skid mounted and comprises of digital temperature control and other higher level instrumentation for the most rigorous applications.

These units are typically used on Offshore platforms and other critical locations.

Hose lengths to 60 metres plus remote mix manifold

Passive Fire Protection (PFP) Application Equipment

Solvent Free Epoxy Intumescent Plural Component Spray

CoverCat 302F

The unit with the simplest operation possible of our Plural component systems using hot water heater for materials tanks and hoses. Suited to most PFP materials with ratio changes made between 1;1, 2:1 2.3:1 and others very easily carried out. A fixed ratio displacement pump, 2 x heavy duty feed pumps and a 50 foot hose bundle with mix block gun and tip are included.

- Easy to Maneuver and operate all equipment on one cart with forklift pockets
- Compact and portable with steering
- Suited to many material applications
- Increased safety - no solvent addition

CoverCat 352F

The CoverCat 352F System is compact, mobile and simple to use being most suited to small and medium sized applications and can replace Single Pack application where solvent addition would have been necessary.

Key Benefits include:

- Easy to operate and service with solvent free application and low wastage
- Produced as a contractor friendly machine for fixed ratio PFP application
- 100 feet (30metre) hoses to remote mix manifold can be extended to 150 feet (45metre)

CoverCat 352FX

CoverCat 352F X Cart Mounted Spray System
Cart mounted system for larger applications.

This unit is a general purpose PFP system and is used where up to 45m hose length is required. Feeding pumps are mounted on the main cart and a central control panel uses a single point power disconnect point. CoverCat 350 Metering pump, 2.3:1 as standard, 52:1 ratio and 6.6 lpm (1.8usg) at 15 cycles/min

Cart Unit has forklift pockets and spill tray.

A lifting frame may be added

Stainless steel Tank have double wall cones 65litre (17USG) and have viewing windows

CoverCat Mix Ram And E-Mix Units

Hydro-pneumatic mixer for Heavy duty coatings and PFP materials. Mounted on a cart unit with simple valve controls for mix speed elevation and operation. The E-Mix is an enclosed ATEX Rated version of the Mix Ram

Fixed Ratio Plural Component Spray Coating Equipment

A standard range of products with upgrade options.

Typically cart mounted but also available on frame or skid mounting for installation in the clients own vehicle or facility.

CoverCat 302

Compact Cart Mounted System suitable for use in confined areas

The **CoverCat 302** has been designed specifically for use where access in confined areas, through building access doors or walkways is required. Also used on Roof areas and on sites where rough ground is common.

The unit is intended mainly for single gun application of a range of low to high solids plural component materials.

It can be used with a remote mix manifold and hose extensions for fast cure materials including Epoxy, Polyurethane and Polyurea coatings.

CoverCat 352E

Heavy Duty and Multi Gun Spray system for Low Solvent, High Solids, Plural Component Paint Spraying with Multi-Gun capabilities

CoverCat 302 range of Compact single gun units

The **CoverCat 352** is a heavy duty spray system typically used in shipyards, heavy industrial or construction facilities where several spray guns may be used simultaneously from one unit.

The machine may be used with remote mix manifold applications for fast cure and 100% solids materials. The unit can be placed upto 60 meters from the Spray gun(s) using umbilical hose assemblies in multiples of 50feet (15m).

Paint supply may be 5 gallon (25litre), or 55 gallon (200litre) drum.

CoverCat 452E

The Bulk Supply Spray System
High Solids, Plural Component Paint Spraying with Multi-Gun capabilities

The **CoverCat 452E** is the largest most powerful plural component spray system made by CoverCat and has no equal in capacity or capability.

A high volume, heavy duty spray system with cart mounted 55 Gallon (200litre) Component Feed drums. The System is regularly used in Shipyards and supplies upto 6 Spray Guns on individual hoses to 500feet (150 meters) from the unit. It has been extensively employed in Shipyards in the USA with great effect. The heavy duty cart with Lift Frame Option is highly portable. It is a self contained unit requiring only air and power supplies to enable operation.

Specialist Plural Component Spray Coating Equipment A range of products for specific applications with upgrade options.

CoverCat 306VR A range of Adjustable Ratio Paint Spraying Machine

CoverCat offers a fixed ratio Spray machine with a simple mechanical adjustable ratio using a cantilever yoke system.

The ratio is fixed at all times during use and so provides accurate ratio control without the concern of any electronic or sliding scale adjustment. To change ratio between products simply release a clamp screw and move the pump to the correct pin located position and tighten the clamp screw.

This means that operator error and other factors are virtually eliminated and a simple ratio test allows the system to be prepared for any new product.

Pressure Output up to 5500 psi (360 Bar) and delivery to 1.25 gallons (6 litres) /minute are achievable at normal stroke rates.

CoverCat Hose Bundle assembly and Remote mix manifold with whip hose and spray gun and reversible spray tip

CoverCat uses the highest specification wire and Kevlar braided hose with a 4:1 safety factor for maximum user protection

- Safety is our primary concern
- Easy to install
- Economical replacement costs

CoverCat Genuine Replacement Spare parts

We strongly recommend and support the use of Genuine CoverCat replacement spare parts and accessories.

We offer Warranty of 12 months on all new equipment and spare parts and this covers replacement of any and all items which may be found faulty due to manufacturing errors or failure however small this maybe.

We are very proud of our quality and will endeavor to achieve zero error but as with any equipment some faults may occur and we will do all we can to support this and ensure that this does repeat itself. Specially selected and quality checked parts and accessories for all CoverCat machines are always on stock for your continuous round the clock support

CoverCat Manufacturing Facilities

CoverCat is located in 8,000 square feet (800 sq m) facility at Stockton on Tees, Cleveland U.K.

Hyperion Equipment Limited

Head office and design facilities located at Primrose Hill in Stockton on Tees, Cleveland, UK

Hyperion holds a full range of components and a comprehensive stock of spare parts and consumable items for all CoverCat equipment for collection or delivery world-wide both direct to clients and through nominated agents and distributors.

Combining all this, we offer On-site Service, Hire and Technical Support, Maintenance Contracts and also Operator Training if required.

This represents a complete support package and one stop shop for our clients requirements in this specialist field of a highly technically capable industry.

CoverCat Lining Solutions Limited

CoverCat Lining Solutions is a newly established operation created in 2012 to facilitate direct client relations with IN Situ, Trenchless lining contracts and technical assistance. The new team will be able to satisfy site based operations for lining works and to provide Materials, Equipment, Technical Support and services to the Pipelining and Contracting Industry.

CoverCat Pipeline Engineering Ltd.

CoverCat Pipeline Engineering Ltd was established in 2001 to provide a full range of pipeline coating equipment for new pipe plant applications principally for use in Petrochemical and Industrial sectors, providing coating plants with spray systems for both internal and external applications. CoverCat Pipeline Engineering has set about the task of designing new lining equipment which will reliably and consistently apply high quality linings in Factory applications. Fixed and portable installations are available.

Our teams are all highly experienced and resourceful and will be pleased to handle your enquires however large or small.

We offer cost effective and innovative solutions. In addition we offer our customers the option of modifying, refurbishing or up-grading existing coating equipment, or of converting equipment to alternative component products for differing applications.

CoverCat equipment is available worldwide through a network of authorised agents and distributors
